

ATG Apply

Developer Brief - Version 1

Human-managed job application service with smart matching and professional application support.

"Real people apply for you. Smart tools help us find the best-fit jobs."

Document purpose	Give the developer a clear build brief for the first working version of ATG Apply.
Launch target	Simple operational platform for the first 100 users.
Business model	Paid application packages after 2 free trial applications.
Operating model	Human team in Sri Lanka handles research, tailoring, quality control and manual applications.
Prepared date	25 June 2026

Important positioning note

Do not present the service as a fully automated AI auto-apply bot. The correct positioning is: human-managed, research-led and supported by smart tools. AI may support matching, CV structure, motivation letter drafting and skills analysis, but final application preparation and submission are handled by trained humans.

1. Project Objective

Build a simple, professional web platform for ATG Apply. The platform should allow users to register, complete a career profile, upload their CV, choose a package, receive job recommendations, approve jobs for application, and track completed applications. The internal team must be able to manage users, upload tailored documents, record application status and provide proof of submission.

The first version should not be overbuilt. It should be a practical dashboard that supports real human operations and helps the team serve the first 100 customers quickly.

Core promise

ATG Apply helps students, graduates, migrants and busy professionals apply for jobs properly when they do not have enough time to research, tailor and submit applications themselves.

Service positioning

Use this wording	Avoid this wording
Human-managed job applications.	Fully human service if AI is used internally.
Research-led job matching.	Mass auto-apply bot.
Smart tools support fit analysis and drafting.	AI applies to jobs automatically everywhere.
Trained staff prepare, check and submit applications.	We scrape LinkedIn/Indeed and auto-submit applications.

Version 1 success definition

- A user can submit all required profile information and upload a CV.
- Admin/team can review the user, recommend jobs and assign fit scores.
- User can view recommended jobs, submitted jobs, package balance and status.
- Team can record completed applications and upload proof.
- Payment can be tracked manually at first.
- The platform can support the first 100 users without complex automation.

2. Packages and Business Model

Package	Applications included	Price	Notes
Trial	2 applications	Free	Used to prove quality and build trust before payment.
Starter	50 applications	USD 60	For students and early-stage jobseekers.
Professional	100 applications	USD 100	Main package. Best balance of value and volume.
Premium	150 applications	USD 150	For serious jobseekers targeting multiple roles/locations.

Payment in Version 1 can be manual through bank transfer, Wise or other available transfer options. Admin should be able to mark payment status manually: Pending, Paid, Partially Paid or Refunded.

3. User Journey

- 1 User visits the ATG Apply website.
- 2 User creates an account or completes an intake form.
- 3 User submits profile details, work experience, target roles and CV.
- 4 User receives 2 free trial applications.
- 5 ATG team reviews the profile and researches suitable roles.
- 6 Team adds recommended jobs with a fit score and short explanation.
- 7 User approves selected jobs for application.
- 8 Team prepares tailored CV/motivation letter and checks quality.
- 9 Human team submits the application manually.
- 10 Dashboard updates with application status and proof of submission.
- 11 After trial, user chooses a paid package and the application balance is updated.

Fit score logic

Score	Meaning	Dashboard explanation
High fit / 80-100%	Strong match	Experience, skills, location and requirements are aligned. Recommended to apply.
Medium fit / 50-79%	Possible match	Some requirements match, but there may be missing skills, visa constraints or experience gaps.
Low fit / below 50%	Weak match	Not recommended unless user has a special reason to apply.

4. Intake Form Requirements

The intake form can start as a professional Google Form for speed, but the website should eventually include its own form connected to the database. The form must capture enough information for the team to apply accurately without repeatedly asking the user for missing details.

Category	Fields
Personal details	Full name, email, phone/WhatsApp, country of residence, nationality, LinkedIn URL, portfolio URL.
Work authorization	Target countries, work authorization/visa status, availability, relocation preference.
Education	Degrees, university, country, graduation date, key modules, certifications.
Experience	Job titles, employers, dates, duties, achievements, tools used, industries.
Target roles	Job titles, sectors, countries/cities, remote/hybrid/on-site preference, expected salary.
Skills and languages	Technical skills, soft skills, languages and proficiency levels.
Documents	Current CV upload, cover letter if available, certificates if useful.
Job links	Links the user wants ATG Apply to review or apply for.
Consent	Checkbox for data processing, privacy policy acceptance and permission to prepare/apply on behalf of user.

Minimum consent wording

"I consent to ATG Apply storing and processing my career profile, CV and application-related information for the purpose of researching jobs, preparing application documents and submitting applications on my behalf. I understand I can request deletion of my data."

5. Customer Dashboard

Section	Required information
Profile summary	Name, target roles, target countries, work authorization, CV upload status.
Package balance	Selected package, total applications, used applications, remaining applications.
Recommended jobs	Company, job title, location, deadline, link, fit score, ATG comment.
User-submitted links	Links submitted by user and review status.
Application tracker	Pending review, approved, in preparation, applied, interview, rejected, follow-up needed.
Documents	Tailored CV and motivation letter versions.
Proof of application	Screenshot, confirmation email, application ID or note.
Payments	Invoice/package, amount, method, payment status.
Support	Message/contact button for questions and updates.

Customer dashboard rule

Users should see professional updates, not internal operational notes. Internal staff comments, quality issues and staff assignment details must remain hidden from users.

6. Admin and Staff Dashboard

Feature	Purpose
User list	See all registered clients and filter by package/status.
User profile view	View full intake form and uploaded documents.
Staff assignment	Assign each user/application to a team member.
Job recommendation entry	Add company, role, location, link, deadline, fit score and notes.
Application workflow	Move applications across statuses: review, approved, drafting, QC, applied, follow-up.
Document upload	Upload tailored CV, motivation letter and other application files.
Quality control	Admin/founder can approve before submission for the first users.
Proof upload	Upload screenshot or confirmation after application is submitted.
Payment management	Mark payment as pending/paid and update application balance.
CSV export	Export users, applications, packages and status for operations/reporting.

7. Website Pages Needed

Page	Purpose
Home	Explain ATG Apply, service promise, packages and CTA.
How it works	Show 4-step process: submit profile, get 2 free applications, review dashboard, choose package.
Pricing	Trial, Starter, Professional and Premium packages.
Sign up / Intake	Account creation and profile submission.
Customer dashboard	User-facing job recommendations and tracker.
Admin dashboard	Internal operations dashboard.
Privacy policy	Explain data handling, consent, deletion and AI/tool usage.
Terms of service	Clarify service limitations, no job guarantee, user responsibility, payment terms.
Contact / Support	Email/WhatsApp contact and support form.

ATG Apply

Your personal job application team.

We help students, graduates and busy professionals find suitable jobs, prepare stronger applications and apply with confidence. Our trained team researches opportunities, checks your fit, tailors your CV and motivation letter, and submits applications on your behalf.

2 applications free. Pay only when you are satisfied.

8. Suggested Database Structure

Table	Important fields
users	id, name, email, phone, country, role, created_at, status.
profiles	user_id, nationality, residence, work_authorization, education, experience, skills, languages, target_roles, target_countries.
documents	id, user_id, type, file_url, version, uploaded_by, visible_to_user, created_at.
packages	id, user_id, package_name, total_applications, used_applications, remaining_applications, payment_status.
jobs	id, user_id, source, company, title, location, job_url, deadline, fit_score, fit_reason, user_approval_status.
applications	id, user_id, job_id, assigned_staff, status, applied_date, proof_url, notes_public, notes_internal.
payments	id, user_id, amount, currency, method, status, transaction_ref, created_at.
activity_log	id, user_id, actor, action, timestamp, details.

9. Recommended Technical Stack

Layer	Recommendation for Version 1
Frontend	Next.js / React or a simple responsive web app.
Backend	Supabase or Firebase to launch quickly.
Authentication	Supabase Auth / Firebase Auth with email login.
Database	Supabase PostgreSQL preferred for structured dashboard data.
File storage	Supabase Storage / Firebase Storage for CVs and proof files.
Admin panel	Simple custom admin dashboard. Avoid complex CRM in V1.
Payments	Manual payment marking first; Stripe/Wise integration later.
Notifications	Basic email notifications for status updates.
Exports	CSV export for operations and reporting.

10. Privacy, Security and AI-Use Rules

The platform will handle personal data, CVs, employment history, education details, contact details and possibly visa/work authorization information. The developer must design the system with privacy and access control from the start.

Non-negotiable rules

- Add a consent checkbox before profile submission.
- Add a privacy policy page and data deletion request option.
- Use role-based access: Admin, Staff and User.
- Users must not see internal staff notes.
- Sensitive personal data must not be sent to external AI tools.
- External AI tools can support general drafting, skills analysis and structure, but avoid sending passports, IDs, full addresses, private documents or unnecessary personal data.
- No automated scraping or bot-based applications on LinkedIn, Indeed or other platforms in Version 1.
- Application submission is human-managed and manual unless official tools/APIs allow otherwise.

Suggested roles and permissions

Role	Permissions
User	View own profile, jobs, application tracker, documents, package and payment status. Submit job links and approve applications.
Staff	View assigned users, add jobs, update applications, upload documents/proof, write internal notes.
Admin	Full access, user management, staff assignment, payments, package edits, quality control and CSV export.

11. Build Priorities

Priority	Build item	Notes
P0	Landing page + pricing + signup	Needed to collect first customers.
P0	Intake form + CV upload	Must work reliably before marketing.
P0	Admin dashboard	Team must be able to operate applications.
P0	Customer dashboard	Users need transparency and trust.
P1	Manual payment tracking	Admin marks payment status.
P1	Email notifications	Notify users when jobs/applications are updated.
P1	CSV export	Useful for team management and reporting.
P2	Automated matching assistance	Add after operations are stable.
P2	Payment gateway integration	Add after first customers prove demand.
P3	Employer-side dashboard	Future phase only.
P3	ATGCV digital CV	Future standalone product.

Developer instruction

Do not overbuild. The first version must be operational, secure and easy for the team to use. Advanced automation, employer matching, ATGCV and payment gateway integrations can come after the first 100 users.

12. Future Roadmap

Phase	Expansion
Phase 1	Human-led job application service for individuals.
Phase 2	Improved job matching, scoring and automated dashboard recommendations.
Phase 3	Employer-side candidate recommendation service.
Phase 4	Scholarship and university application support for developing-country students.
Phase 5	ATGCV - a verified digital career profile that can be used to apply across platforms.

Final note for developer

Build for trust first: clear dashboard, visible proof, secure data handling and simple operations. ATG Apply should feel like a professional career support team, not a generic AI auto-apply website.
